Introduction to sitemgr

Module

The main function of a sitemq module is toq ene ate dynamic web site content. To make the development of new modules, and the use of modules easy

only one place whe e cont ibuto edited content went (pa e_content) and two places

Maintenance

As a site administ ato , you have th ee

build_input_element(($input,$default,$elementname)

This is a helpe function fo abov. functions. If you on. of abov. func

names fo this se vice to wo k. The build_post_element function can help you do this. Fo example lets extend ou hello module, so that the site use can choose his own name. Since we can no lo q e ely on the validation that is automati cally donee,

1. It is w itten as a class called module_name and extends the class Module. It must be put into a file called class.module_name.inc.php and put into the inc di ecto y of any php oupwa e
